The invention is useful for the treatment, prevention and diagnosis of pancreatic cancer, and also of other cancers including colon, breast, lung, prostate, oesophagus, stomach, liver, spleen, kidney, gall bladder, ovary, testis, bladder, thyroid and brain cancer and blood neoplasms.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            음 성
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   문
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         δ
                                                 The present invention relates to apoptosis inducers and protease inhibitors, which contain a compound inhibiting the activity or expression of human serine protease HTMA3 (ADDQ1199 and ADQ1115). The invention is useful for the treatment, prevention and diagnosis of pancreatic cancer, and also of other cancers including colon, breast, lung, prostate, oesophagus, stomach, liver, spleen, kidney, gall bladder, ovary, testis, bladder, thyroid and brain cancer and blood neoplasms. The present sequence was used to illustrate the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Homo

                                                                                                                                                                                                                                                                                        The present invention relates to apoptosis inducers and protease inhibitors, which contain a compound inhibiting the activity or expression of human serine protease HTRA3 (ADD01199 and AD01115). The invention is useful for the treatment, prevention and diagnosis of pancreatic cancer, and also of other cancers including colon, breast, lung, prostate, oesophagus, stomach, liver, spleen, kidney, gall bladder, ovary, testis, bladder, thyroid and brain cancer and blood neoplasms. The present sequence is a coding sequence for HTRA3.

                                                       The present invention relates to apoptosis inducers and protease inhibitors, which contain a compound inhibiting the activity or expression of human serine protease HTRA3 (ADO01090 and AD001115). The invention is useful for the treatment, prevention and diagnosis of pancreatic cancer, and also of other cancers including colon, breast, pancreatic, oesophagus, stomach, liver, spleen, kidney, gall bladd ovary, testis, bladder, thyroid and brain cancer and blood neoplasms. present sequence was used to illustrate the invention.
                                                      Sequence 1375 BP; 258 A; 447 C;
                                                                                                                                                                                                                                       Apoptosis inducers inhibiting activity or expression of serine protease HTRA3 for treatment, prevention and diagnosis of pancreatic cancer.
                                                                                                                                                                                                                                                                                                                                                                     01-NOV-2002; 2002JP-00320075

The present invention relates to apoptosis inducers and protease
CC inhibitors, which contain a compound inhibiting the activity or
CC invention of human serine protease HTRA3 (ADO01090 and ADO01115). The
CC invention is useful for the treatment, prevention and diagnosis of
CC pancreatic cancer, and also of other cancers including colon, breast,
CC lung, prostate, oesophagus, stomach, liver, spleen, kidney, gall bladder,
CC ovary, testis, bladder, thyroid and brain cancer and blood neoplasms. The
CC present sequence was used to illustrate the invention.

```

The present sequence encodes a murine HtrA-2 (high temperature crequirement A-2) protein. The specification also describes TANGO 219 polypeptides. HtrA-2 nucleic acid, proteins and its modulators can be used to treat bone and/or cartilage associated diseases or disorders. CC e.g. bone breakage, cartilage tearing, osteoporosis, arthritis, cc heart disease, atherosclerosis, hyperplasia, and ventricular cc fibrilation. HtrA-2 can also modulate IGF function and can be used to freat visceromegaly, placentomegaly, cardiac and adrenal defects, cc seckwith-Weidermann syndrome, and cancer. It is useful to treat disorders cc involving abnormal cellular migration, proliferation. HtrA-2 acts as a cc involving abnormal cellular migration, proliferation. HtrA-2 acts as a crime protease and can be used to treat Alzheimer's disease. HtrA-2 can also be used to treat multiple sclerosis, Huntington's disease. HtrA-2 can lewy body disease, neurodegeneration, frontal lone dementia, cortical lewy body disease, acquired immunodeficiency syndrome (AIDS), dementia can modulate adipocyte function and adipocyte-related processes and can chronic epilepsy. HtrA-2 nucleic acids, proteins and its modulators can modulate adipocyte function and adipocyte-related processes and ce.g., ischemic heart disease or atherosclerosis, or cerebrovascular cc e.g., ischemic heart disease or atherosclerosis, or cerebrovascular convolving heart contraction, and the impulse generating conditions cc involving heart contraction, and the impulse generating nodes and cardiac and cancel cells, e.g. ventricular fibrillation or myocardial infarction

New NOVX polypeptides and polynucleotides useful for treating or preventing e.g. cardiomyopathy, atherosclerosis, hypertension, congenital heart defects, aortic stenosis, atrial septal defect, or atrioventricular

Claim 20; Page 197; 491pp; English

ACF16939 to ACF17000 encode the human G protein-coupled receptor (GPCR) CC proteins, designated NOVX proteins, given in ABR96130 to ABR96191. The CO NOVX sequences can have cytostatic, cardiovascular, antiasthmatic, immunosuppressive, anti-HIV (human immunodeficiency virus), hypotensive and antiarteriosclerotic activities, and can be used in gene therapy. NoVX polypeptides can be used to treating a syndrome associated with a comman disease such as a pathology associated with the polypeptide. NOVX polypeptides, polymucleotides and antibodies can be used for treating or preventing e.g. cardiomyopathy, atherosclerosis, hypertension, congenital cheart defects, pulmonary stenosis, atrial septal defect, atrioventricular canal defect, pulmonary stenosis, prostate cancer, uterine cancer, neoplasm, graft versus host disease, acquired immunodeficiency syndrome (AIDS), Crohn's disease, multiple sclerosis, or bronchial asthma. The nucleic acid sequences may be used in promosome mapping, identifying individual from minute biological samples (tissue typing), and in represent PCR primers and probes for the NOVX sequences, which are used an the present

Novel human proteases and polynucleotides encoding the proteases, useful for treating, diagnosing or preventing cell proliferative, cardiovascular, autoimmune/inflammatory, neurological and developmental

Claim 5; Page 150-151; 151pp; English

The invention relates to human proteases (PRTS1-14) and its corresponding CDNA molecules. Human PRTS and its nucleic acid molecule are useful for the diagnosis, treatment and prevention of disorders associated with increased or decreased expression of PRTS. Examples of such disorders include, cell proliferative disorders (arteriosclerosis, atherosclerosis, hepatitis, psoriasis and cancers); autoimmune/inflammatory disorders (AIDS, Addison's disease, allergy, anaemia, asthma, atopic dermatitis, diabetes mellitus, glomerulonephritis, multiple sclerosis, osteoporosis, trauma, Grave's disease, rheumatoid arthritis, ulcerative colitis, and viral, bacterial, parasitic, protozoal and helminthic infections); cardiovascular disorders (myocardial infarction, ischaemic heart

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    (Crohn's disease, anorexia, nausea, diarrhoea and jaundice); epithelial disorders (contact dermatitis, eczema, acne vulgaris, alopecia, scabies, insect bites and urticaria); reproductive disorder (infertility, disruption of estrous and menstrual cycle and gynaecomastia); and developmental disorders (renal tubular acidosis, Cushing's syndrome, seizure disorders, congenital glaucoma and cataract). PRTS DNA is also in useful is gene therapy. PRTS and its immunogenic fragments are useful for screening libraries of compounds in several drug screening assays. The present sequence is human protease PRTS-14 cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             disease and hypertension); neurological disorders (epilepsy, Alzheim disease, Pick's disease, Huntington's disease, dementia, Parkinson's disease, stroke, mental disorders including mood, anxiety and season affective disorder and prion diseases); gastrointestinal disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 1797

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     중 음
                                                     The invention comprises human nucleotide sequences which are co-expressed with matrix-remodeling genes. Matrix-remodeling is associated with the construction, destruction and reorganisation of extracellular matrix components. The matrix-remodeling-associated nucleotides of the invention are useful for screening for and purifying ligands that specifically bind to the nucleotides of the invention. The matrix-remodelling-associated nucleotides of the invention are also useful in the diagnosis, prognosis, prevention, treatment and evaluation of therapies for diseases associated with matrix remodelling (e.g. angiogenesis, arthritis, atherosclerosis, cancer, cardiomyopathy, diabetic necrosis, fibrosis and ulceration). The present DNA sequence represents a human matrix-remodeling-associated nucleotide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; ds; matrix-remodeling gene; extracellular matrix; gene; matrix-remodeling-associated nucleotide; screening; matrix remodelling-associated disease; angiogenesis; arthritis; atherosclerosis; cancer; cardiomyopathy; diabetic necrosis; fibrosis;

                                                      The invention relates to isolated human polypeptides designated LP102, CC LP187, LP190 and LP241, and the polynucleotides encoding them. The LP polypeptide or the LP polypeptide agonist is useful for treating a mammal CC suffering from a disease, condition or disorder associated with aberrant levels of an LP polypeptide. The LP polypeptides or polynucleotides, or CC inflammatory disorders, bone diseases or cardiovascular diseases. In CC particular, the LP102 polypeptides, polynucleotides or antibodies are useful for diagnosing, preventing or treating male reproductive system CC diseases, osteoporosis, Paget's disease, metastatic or myeloma associated bone diseases or Alzheimer's disease, metastatic or myeloma associated contraceptive agents. The LP187 polypeptides, polynucleotides or antibodies are useful for diagnosing, preventing or treating preventing or treating cancer, as well as other growth factor-mediated diseases and CC useful for diagnosing, preventing or treating asthma, anaphylaxis, and CC useful for diagnosing, preventing or treating asthma, anaphylaxis, and CC diseases related to coagulation or sepsis. LP241 polypeptides, polynucleotides are useful for diagnosing, preventing or treating asthma, anaphylaxis, and CC useful for the LP polynucleotides are useful especially for diagnosing, preventing or treating sethma, anaphylaxis, and CC useful for the LP polynucleotides are useful especially for diagnosing, preventing or treating sethma anaphylaxis and vectors that may be employed in medicine, or for preparing the proteins. The present sequence represents the coding sequence of LP241
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁

                                                                                                                                                                                                                                                                                                                                                    The present sequence relates to a new isolated nucleic acid molecule, which is expressed in endometrium and placenta and is upregulated in pregnant uterus and is highly expressed during placental development, pregnant uterus and is highly expressed during placental development, pregnant uterus and is highly expressed during placental development, pregnant considered growth factor (IGF)-binding motif. The compound is considered growth factor (yeostatic and cardiant. The enzyme is specifically gynecological, cytostatic and cardiant. The enzyme is specifically gynecological, cytostatic and cardiant. The enzyme is specifically gynecological, cytostatic and cardiant. The enzyme is specifically in a expressed in association with embryo implantation and placentation in a expression. The nucleic acid is useful for preparing a composition for treating pRSP-related condition e.g., infertility, endometricals, cancer or a disease of the heart, testis or ovaries. Further, it is useful for detecting, diagnosing or monitoring a condition involving a change in pRSP expression. The sequence is present in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     cardiant;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           US-10-617-443B-2 (1-334) x ADO01092
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to apoptosis inducers and protease inhibitors, which contain a compound inhibiting the activity or expression of human serine protease HTRA3 (ADD01109) and AD01115). The invention is useful for the treatment, prevention and diagnosis of pancreatic cancer, and also of other cancers including colon, breast, lung, prostate, oesophagus, stomach, liver, spleen, kidney, gall bladder, ovary, testis, bladder, thyroid and brain cancer and blood neoplasms. The present sequence was used to illustrate the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Disclosure;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            유
Sequence 22, Application US/09724864
Patent No. 6380362
GENERAL INFORMATION:
APPLICANT: Watson, James D
APPLICANT: Mutison, James D
APPLICANT: Mutison, James G
TITLE OF INVENTION: Polynucleotides, polypeptides expressed
TITLE OF INVENTION: by the polynucleotides and methods for t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1144
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1084
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1024
